

Phone Hex Editor Pro

Progwhiz Phone Hex Editor Pro is as versatile and powerful as it is simple to use/ The key features are itemized as follows:

- ❖ Ability to open any file Binary or ASCII
- ❖ Ability to open **Read Only** or **Read/Write** permission Files
- **❖** Ability to search for text **Patterns**
- Ability to ignore Case in Text pattern search
- Ability to search using Hexadecimal
- ❖ Ability to search for text using Wildcards
 e.g. Search using H??p will return (Help, Heep, Heap, ... etc)
- Search for explicit use of "?"e.g. use /? Where "/" is an escape character when used in conjunction with "?"
- Search wildcards using 8Bit Hex search
 e.g 3430??31 Will look for text equivalent to 40?1
- Ability to Replace searched Text pattern
 - e.g. 1) Search for text Help and Replace with Have
 - e.g. 2) Search for text Help and Replace with T??! which equates to Tell
- ❖ Ability to **Search/Replace** Hexadecimal pattern using 4Bit values
 - e.g Search for 3?3???31 will fetch a pattern like but not limited to 34368531
 - e.g Search for **3?3???31** will fetch say **34368531** and replace with **?9?2????** will produce **39328531**

The following are screen shots to illustrate some of the functionality in Progwhiz Hex Editor in this user manual

Search File Dialog

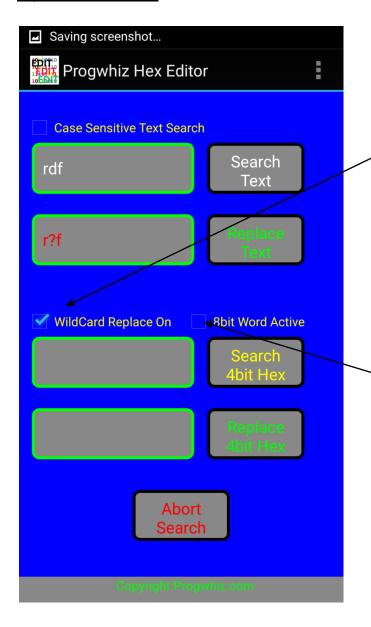

Wild Card Search

Search using Explicit Question Mark (?)

Replace Pattern in Text

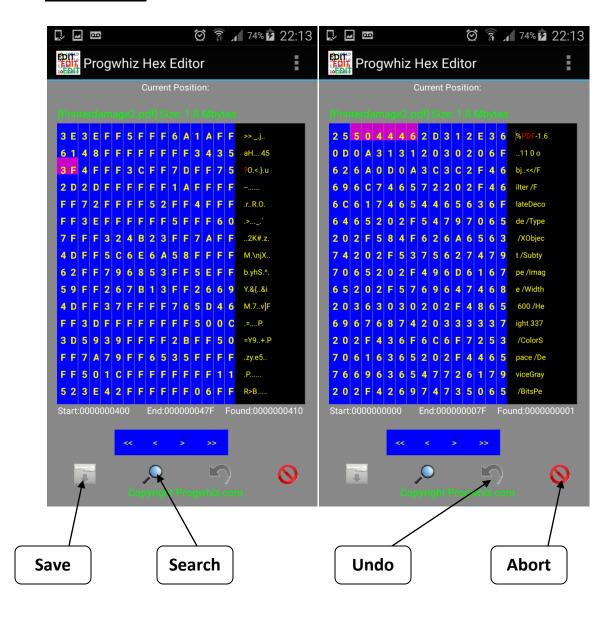

When *Checkbox is set* the '?' is treated as a wildcard or unknown 8bit character(Text Replace) or unknown 4bit character (Hex Replace.

When *Checkbox is not set* a '?' is treated as a literal value to replace. Only applicable for Text Search

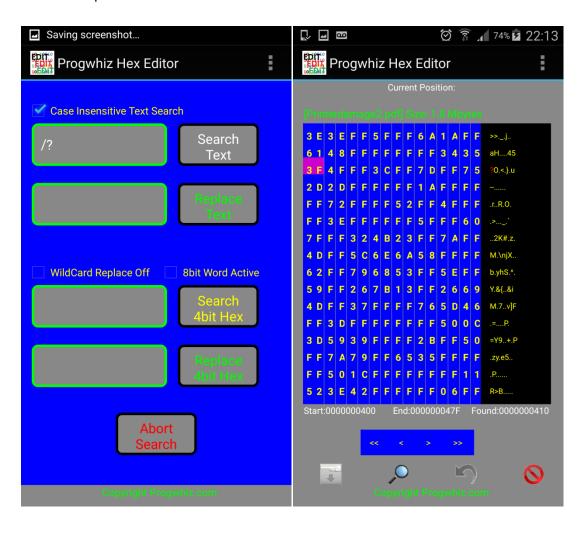

When *Checkbox is set* (4Bit Word Active). The pattern can start at either the least significant or most significant 4bit value.

When *Checkbox is not set* (8Bit Word Active). The pattern can only start at the least significant 4bit value.
